

MUSIC HEALING

2009

Product Support: Music Healing Soundtrack to Your Healing

☞ Thank you for investing into XME Inc. Products. Music Healing is among the first of many exciting relaxation and music applications we are creating for Apple's iPhone and iPod Touch. To ensure that we keep our customers returning for more, we respond quickly to your requests so feel free to contact xmeapps@yahoo.com.

Q&A: Questions and Answers you may need...

1.) How do I start a song?

To start a song, simply tap the song name. To stop, simply tap again. When you see the icon on the far right of the clicker, this signifies that the current song is playing.

2.) What if my device Freezes?

It is a common issue for mobile applications to cause a device to freeze. There are a few reasons.

1.) There is not as much memory for applications as a desktop on a phone.

2.) The AppStore caters to 4 Devices (And Counting). 1st and 2nd Generation iPod Touches and 1st and 2nd Generation iPhones. Each has different amounts of memory and processing speeds. (See Below for Solutions)

3.) Every user is different and therefore uses their mobile device in a different way. Some only use email. Some only use the web. Some only play games while some DO IT ALL.

If you are one of those people who “Does it all” on your iPhone or iPod Touch or are just encountering problems, consider these suggestions for helping your device to run better.

1.) Restart Your Device After Installing Large Applications.

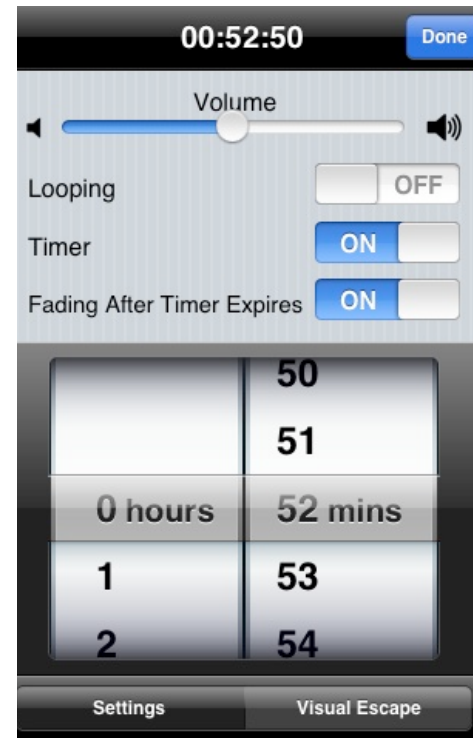

2.) Run Applications Like “FreeMemory” to help free application memory without having to restart your device.

3.) If issues persist, Delete applications that your device struggles to run and reinstall.

4.) If these general help topics fail you, contact xmeapps@yahoo.com for help with your specific needs.

2.) How to view Image/Slides?

Press the “i” button on the top right hand corner of the

application’s main screen. Then tap the “Visual Escape” tap at the bottom of the settings screen. There you will see the built-in beautiful imagery.

2.) How do I set the timer?

Press the “i” button on the top right hand of the application’s main screen. There you will see the Timer and settings screen. You can disable looping to allow the entire playlist to play as an album would, activate the timer, and adjust the volume from this screen.
